PROFESSIONAL SUMMARY

Software & Security Engineer with 3+ years supporting cloud-native applications and distributed systems. Experienced in troubleshooting Linux, PostgreSQL, and cloud platforms (AWS, Azure), and automating incident response using Python and Bash. Proven success in reducing MTTR, improving infrastructure resilience, and enhancing customer outcomes. Passionate about open-source technologies and driving seamless customer experiences in fully remote environments.

EXPERIENCE

DevSecOps Engineer

Aditas Solutions

Jul 2025 – Present
Chicago, United States

- Engineered a secure virtualized platform by deploying Proxmox with OPNsense (VLANs, NAT, ACLs, CIS hardening) to segment workloads, achieving zero cross-segment incidents and reducing infrastructure costs by 25%.
- Automated infrastructure provisioning by developing reusable Terraform modules and idempotent Ansible roles (hardening, users, patching), cutting environment build time by 80% and eliminating configuration drift.
- Implemented a WireGuard VPN solution across OPNsense/Proxmox with routed subnets, peer rotation, and rate limits, enabling shorter client onboarding and greater tunnel uptime.
- Built shift-left CI/CD security pipelines with GitHub Actions + OIDC, integrating SAST (CodeQL), IaC scans (tfsec/Checkov), container scans (Trivy), and SBOM/signature gates to block 30+ high/critical issues pre-production and improve deployment lead time by 40%.
- Hardened secrets and identity management by migrating credentials to Azure Key Vault/Vault, implementing short-lived tokens and service-level RBAC, removing long-lived secrets from pipelines, and achieving 0 critical findings in the latest security audit.
- Enhanced observability and incident readiness by centralizing telemetry via Log Analytics, Splunk, and Datadog, creating alerts/runbooks for auth anomalies and VPN health, resulting in 45% MTTR reduction and 30% fewer false positives.
- Embedded compliance-as-code using CIS/NIST baselines via Ansible and OPA/Conftest for Terraform/Kubernetes, automating vulnerability reviews and patch windows to reach up to 95% policy compliance and 60% CVE backlog reduction.
- Authored detailed operational documentation including architecture diagrams, runbooks, onboarding, and “break-glass” procedures, driving 35% fewer how-to support tickets and faster cross-team handoffs.

Software Engineer – Security & Detection Focus

James Fisher Straininstall

May 2022 – Oct 2023
Dubai, UAE

- Developed a Django-based Smart Asset Management System with REST API integrations and JavaScript UI, boosting tracking efficiency for 150+ assets under secure SDLC.
- Enhanced application security by 30% by applying OWASP secure coding principles and integrating SAST tools and behavior-based threat detection.
- Directed AWS cloud migration for multi-service platform; implemented IAM roles, VPC security groups, and TLS encryption, increasing uptime by 45%.
- Managed Linux server ops (Debian/CentOS), resolved vulnerabilities, and optimized PostgreSQL using VACUUM, indexes, and query tuning, reducing incident time by 20%.
- Developed Dockerized Python modules to automate SIEM alerts, cutting mean time to recovery (MTTR) by 35% and improving threat triage.
- Authored 20+ SOPs for DevSecOps workflows, covering CI/CD, secure deployment, and IR playbooks, accelerating cross-team onboarding and readiness.
- Automated cloud infrastructure security using Ansible and Terraform in Bitbucket pipelines; enforced IAM policies and least privilege across AWS workloads.
- Improved service availability by 20% by configuring AWS Elastic Load Balancer (ELB) for EC2 and Lambda deployments.
- Centralized and parsed AWS logs in CloudWatch with custom metric filters and alerts, reducing escalation time by 25% for critical threats.

Technical Support Engineer – Cybersecurity & Endpoint Security

Neutral Fuels Holdings Ltd

Jun 2021 – Mar 2022
Dubai, UAE

- Orchestrated migration to Microsoft 365 and Exchange for 200+ users, enhancing endpoint security by 70% and streamlining email threat response workflows.
- Configured Microsoft Defender and Exchange Online Protection policies to filter phishing/spam emails, reducing incident response time by 40%.
- Installed Wireless Mesh Networks using Cisco APs and integrated Layer 7 firewall anomaly detection, increasing network uptime and coverage across 3 zones.
- Created ITIL-aligned SOPs and enforced security policies for 100+ endpoints via Microsoft Intune, JumpCloud, and SureMDM, boosting IT-Security alignment.
- Deployed Azure AD features (SSO, MFA, Conditional Access), increasing BYOD device security and identity compliance by 45%.
- Implemented Freshservice ITSM platform to manage tickets for 200+ users, improving tracking and resolution efficiency by 60%.
- Delivered technical reports and post-incident reviews to stakeholders, strengthening communication and cross-functional collaboration.
- Oversaw procurement of IT/security assets and optimized endpoint protection tools, reducing vulnerabilities by 25% through lifecycle controls.

Cybersecurity Engineer Intern

Schneider Electric

Jun 2020 – Sep 2020
Dubai, UAE

- Configured RBAC and network ACLs for industrial customer systems, tailoring cybersecurity solutions to reduce operational vulnerabilities and improve access security.
- Conducted threat-hunting and incident response simulations in ICS/SCADA environments, enhancing detection capabilities for OT threats in industrial networks.
- Designed IoT cybersecurity strategies aligned with NIST 800-82 and ISO 27001 standards; contributed to incident response planning and risk mitigation for edge devices.

EDUCATION

Illinois Institute of Technology

Master of Applied Science in Cybersecurity (M.A.S.)

Chicago, IL
Graduation Date: May 2025

Rochester Institute of Technology

Bachelor of Science in Computing Security (B.Sc.)

Rochester, NY
Graduation Date: Dec 2021

Relevant Coursework: Penetration Testing, Computer System Forensics, Intelligent Security Systems, Cryptography, Network & System Security Audit, Network Design & Performance, Wireless Networking, Web Application Security, System Administration, Routing & Switching

Extracurricular: Dean's List, Collegiate Penetration Testing Competition (CPTC) Regional Winner, Research Assistant in Security Systems

PROJECT EXPERIENCE

- ATO Detection & Auto-Containment (Flask, Datadog, Azure)** — [Link to project](#) August 2025 – Present
- Built a production-style ATO detection & auto-containment lab: detections-as-code in Datadog trigger an HMAC-signed webhook to an Azure Function that revokes risky Flask sessions in real time.
- Azure Event-Driven Microservice (DevSecOps Blueprint)** — [Link to project](#) July 2025 – Present
- Built a secure, event-driven microservice on Azure Container Apps (FastAPI + Python worker) with Terraform and GitHub Actions (OIDC), using Key Vault secret references, Service Bus, and KEDA autoscaling.
- Splunk Enterprise + Splunk SOAR Homelab** — [Link to project](#) May 2024 – Present
- Built a 24x7 Splunk ES homelab (Developer License) that ingested Windows/Linux logs, monitored alert queues, triaged events, escalated incidents, and executed SOAR playbooks for auto-containment.
 - Demonstrated end-to-end SIEM and SOAR capabilities for real-time threat detection and remediation (e.g., blocking IPs, notifying teams).
- Server Hardening Playbook** — [Link to project](#) Jan 2023 – Present
- Created a fully automated, open-source, and idempotent Bash script to harden Linux servers by enforcing password policies, configuring firewalls/SSH, and disabling insecure services, improving baseline security compliance across 10+ systems.

SKILLS & INTERESTS

- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Cloud & Infrastructure:** AWS (EC2, IAM, ELB, S3, RDS, CloudWatch), Azure (AD, Defender, DevOps), GCP, Microsoft 365, Microsoft Intune
- **Security & Compliance:** Zero Trust, IAM, SIEM (Splunk ES, SOAR), MITRE ATT&CK, NIST, ISO 27001, ITIL, SOX, PCI DSS
- **Programming & Automation:** Python, Bash, C, SQL, Ruby, PowerShell, JavaScript, HTML/CSS
- **Networking & Systems:** Terraform, Ansible, Docker, Kubernetes, Bitbucket/GitHub CI/CD, Git, PowerBI
- **Systems& Networking:** Linux (Debian, Ubuntu, CentOS), Windows Server, MacOS, Wireshark, Nmap, Cisco Wireless/Firewall

CERTIFICATIONS

- **Security+**, CompTIA — [Link to Certification](#) Issued: Feb 2025
- **AWS Certified Cloud Practitioner**, Amazon Web Services In-progress: Expected Oct 2025
- **AWS Certified Security - Specialty**, Amazon Web Services In-progress Expected Nov 2025
