PROFESSIONAL SUMMARY

DevSecOps & Security Engineer with 3+ years of experience designing and hardening cloud-native infrastructure, automating deployments, and improving incident response. Cut MTTR by 45%, reduced infra costs by 25%, and blocked 30+ critical vulns pre-production by building secure CI/CD, IaC, and observability pipelines across AWS, Azure, and Proxmox.

EXPERIENCE

DevSecOps Engineer

Aditas Solutions

Jul 2025 – Present

Chicago, United States

- Engineered a secure virtualized platform on Proxmox with OPNsense (VLAN segmentation, NAT, ACLs, CIS hardening), eliminating cross-segment exposure and reducing infra cost by 25%.
- Automated provisioning with reusable Terraform modules and idempotent Ansible roles, cutting environment build time by 80% and eliminating config drift.
- Built shift-left CI/CD security (GitHub Actions + OIDC, CodeQL, tfsec/Checkov, Trivy, SBOM signing) to block 30+ critical vulns pre-production and improve deployment lead time by 40%.
- Centralized logging/monitoring with Log Analytics, Splunk, and Datadog; created runbooks for auth anomalies and VPN health, reducing MTTR by 45% and false positives by 30%.
- Enforced compliance-as-code (CIS/NIST baselines via Ansible and OPA/Conftest) and Vault-based secrets/RBAC, reaching up to 95% policy compliance, driving a 60% CVE backlog reduction, and delivering 0 critical audit findings.

Software Engineer – Security & Detection Focus

James Fisher Straininstall

May 2022 – Oct 2023

Dubai, UAE

- Built a Django-based Smart Asset Management platform (REST API + JS UI) to track 150+ assets, improving operational visibility and data accuracy.
- Led AWS migration (granular IAM, VPC segmentation, TLS everywhere), increasing service uptime by 45%.
- Automated incident response with Dockerized Python modules consuming SIEM alerts, cutting MTTR by 35% and speeding threat triage.
- Hardened Linux (Ubuntu/CentOS) stacks and tuned PostgreSQL (VACUUM, indexing, query tuning), reducing incident resolution time by 20%.
- Authored 20+ SOPs for CI/CD, secure deployment, and IR workflows, standardizing on-call playbooks and accelerating onboarding.

Technical Support Engineer – Cybersecurity & Endpoint Security

Neutral Fuels Holdings Ltd

Jun 2021 – Mar 2022

Dubai, UAE

- Migrated 200+ users to Microsoft 365 / Exchange Online and rolled out Defender / EOP policies, improving email + endpoint security by 70% and cutting phishing response time 40%.
- Built secure wireless mesh networking (Cisco APs + NGFW L7 anomaly detection), boosting uptime and coverage across 3 zones.
- Enforced endpoint and identity controls via Intune, JumpCloud, SureMDM, and Azure AD (SSO, MFA, Conditional Access), strengthening BYOD compliance by 45%.
- Deployed Freshservice ITSM for 200+ users, increasing ticket tracking and resolution efficiency by 60% and formalizing post-incident reporting.

Cybersecurity Engineer Intern

Schneider Electric

Jun 2020 – Sep 2020

Dubai, UAE

- Implemented RBAC and network ACLs for ICS/SCADA environments to reduce operational exposure in OT networks.
- Supported threat hunting and incident response simulations aligned to NIST 800-82 / ISO 27001 for industrial IoT.

EDUCATION

Illinois Institute of Technology

Master of Applied Science in Cybersecurity (M.A.S.)

Chicago, IL

Graduation Date: May 2025

Rochester Institute of Technology

Bachelor of Science in Computing Security (B.Sc.)

Rochester, NY

Graduation Date: Dec 2021

Relevant Coursework: Penetration Testing, Digital Forensics, Intelligent Security Systems, Cryptography, Network Security, Web App Security

Extracurricular: Dean's List, Collegiate Penetration Testing Competition (CPTC) Regional Winner, Research Assistant in Security Systems

PROJECT EXPERIENCE

ATO Detection & Auto-Containment (Flask, Datadog, Azure) — [Link to project](#)

August 2025 – Present

- Detections-as-code triggers signed webhooks to an Azure Function that kills suspicious user sessions in real time..

Azure Event-Driven Microservice — [Link to project](#)

July 2025 – Present

- Secure, event-driven service on Azure Container Apps using Key Vault secret refs, Service Bus, and KEDA autoscaling.

Splunk Enterprise + Splunk SOAR Homelab — [Link to project](#)

May 2024 – Present

- SIEM/SOAR home lab ingesting Windows/Linux logs, triaging alerts, escalating incidents, and auto-executing containment playbooks.

SKILLS & INTERESTS

- DevOps & Automation:** Terraform, Ansible, CI/CD (GitHub Actions, Bitbucket Pipelines), Docker, Linux (Debian/Ubuntu, CentOS), Bash & Python scripting
- Cloud & Infrastructure:** AWS (EC2, VPC, IAM, CloudWatch, ELB), Azure (Azure AD, Key Vault, Log Analytics), Proxmox Virtualization, OPNsense Firewall, Cisco Networking, VPN (WireGuard)
- Security & Monitoring:** SIEM/Logging (Splunk, Datadog, Azure Monitor), Threat Detection & Incident Response, Vulnerability Management (CIS benchmarks, NIST compliance, CVE remediation), SAST/CodeQL, IaC Security (tfsec, Checkov), Container Security (Trivy)
- Programming & Automation:** Python (Django framework), REST APIs, JavaScript, SQL (PostgreSQL), Secure SDLC practices (OWASP guidelines)

CERTIFICATIONS

- Security+, CompTIA — [Link to Certification](#)
- AWS Certified Cloud Practitioner, Amazon Web Services
- AWS Certified Security - Specialty, Amazon Web Services

Issued: Feb 2025

In-progress: Expected Nov 2025

In-progress Expected Nov 2025
