WORK EXPERIENCE

Aditas Solutions

Chicago, IL

DevSecOps Engineer

July 2025 - Present

- **Secure Infrastructure Design:** Engineered a virtualized infrastructure using Proxmox and OPNsense (VLANs, NAT, ACLs, CIS hardening) to segment workloads, achieving zero cross-segment incidents and reducing infrastructure costs by 25%.
- **Infrastructure Automation:** Built reusable Terraform modules and idempotent Ansible roles (hardening, users, patching) to automate provisioning, cutting environment build time by 80% and eliminating configuration drift.
- **VPN & Network Security:** Implemented a WireGuard VPN solution across OPNsense/Proxmox with routed subnets, peer rotation, and rate limits, resulting in faster client onboarding and improved tunnel uptime.
- **DevSecOps Enablement:** Designed shift-left CI/CD security pipelines with GitHub Actions + OIDC, integrating SAST (CodeQL), IaC scanning (tfsec/Checkov), container scanning (Trivy), and SBOM/signature enforcement, blocking 30+ high/critical vulnerabilities.
- **Penetration Testing:** Conducted advanced manual exploitation and red-team assessments across web applications, APIs, and internal infrastructure, identifying high-impact vulnerabilities and delivering actionable remediation guidance that reduced exploit risk.
- **Secrets & Identity Hardening:** Migrated credentials to Azure Key Vault and HashiCorp Vault, enforced short-lived tokens and service-level RBAC, eliminating long-lived secrets and achieving 0 critical audit findings.
- **Observability & Incident Response:** Centralized telemetry through Azure Log Analytics, Splunk, and Datadog, implementing alerting and runbooks for authentication anomalies and VPN health, cutting MTTR by 45% and reducing false positives by 30%.
- **Compliance Automation:** Embedded CIS/NIST baselines via Ansible and OPA/Conftest for Terraform/Kubernetes, automating vulnerability reviews and patch windows to reach 95% policy compliance and 60% CVE backlog reduction.
- **Documentation & Knowledge Sharing:** Authored detailed operational and architectural documentation, including network topology diagrams, security workflows, disaster recovery procedures, and reporting vulnerabilities, improving audit readiness.

James Fisher Straininstall

Dubai, UAE

Security Engineer

May 2022 - October 2023

- **Smart Asset Management Platform:** Designed and developed a Django-based Smart Asset Management System with REST APIs and an interactive JavaScript UI, improving real-time tracking efficiency for 150+ industrial assets under a secure SDLC framework.
- **Application Security Enhancement:** Strengthened application defenses by 30% through implementation of OWASP secure coding standards, integration of SAST tools, and behavior-based threat detection across the codebase.
- **Cloud Security & Migration:** Directed AWS cloud migration for a multi-service platform, deploying IAM roles, VPC security groups, and TLS encryption, which increased platform uptime by 45% and ensured compliance with internal security policies.
- **Server & Database Hardening:** Managed Linux servers (Debian/CentOS), remediated OS-level vulnerabilities, and optimized PostgreSQL performance via VACUUM, indexing, and query tuning, reducing incident response time by 20%.
- **SIEM Automation:** Built Dockerized Python modules to automate SIEM alert processing, cutting mean time to recovery (MTTR) by 35% and improving threat triage accuracy.
- **DevSecOps Documentation:** Authored 20+ Standard Operating Procedures (SOPs) for CI/CD, secure deployment, and incident response playbooks, accelerating team onboarding and improving operational readiness.
- **Infrastructure as Code (IaC) Security:** Automated cloud security provisioning with Ansible and Terraform in Bitbucket pipelines, enforcing IAM least-privilege policies across AWS workloads for consistent compliance.
- **High Availability & Load Balancing:** Enhanced service resilience by 20% through configuration of AWS Elastic Load Balancers (ELB) for EC2 and Lambda deployments.
- **Threat Detection & Logging:** Centralized AWS logs using CloudWatch, creating custom metric filters and alerts to detect and respond to threats faster, reducing escalation time by 25%.

Neutral Fuels Holdings Ltd

Dubai, UAE

Technical Support Engineer – Cybersecurity & Endpoint Security

June 2021 - March 2022

- **Cloud & Email Security Migration:** Led the migration to Microsoft 365 and Exchange Online for 200+ users, enhancing endpoint security by 70% and streamlining email threat response workflows across the organization.
- **Threat Protection Configuration:** Deployed Microsoft Defender and Exchange Online Protection (EOP) policies to mitigate phishing and spam, achieving a 40% reduction in incident response time.
- **Network Optimization:** Installed and configured Cisco Wireless Mesh Networks with integrated Layer 7 firewall anomaly detection, improving network uptime and coverage across 3 operational zones.
- **Endpoint Management & Policy Enforcement:** Created ITIL-aligned SOPs and implemented endpoint security baselines for 100+ devices via Microsoft Intune, JumpCloud, and SureMDM, increasing IT-security alignment and compliance.
- **Identity & Access Security:** Configured Azure AD features including Single Sign-On (SSO), Multi-Factor Authentication (MFA), and Conditional Access, boosting BYOD device compliance by 45%.
- **ITSM Implementation:** Deployed and managed Freshservice ITSM for 200+ users, improving ticket tracking and resolution efficiency by 60% through automated workflows and SLA metrics.
- **Incident & Reporting:** Delivered technical post-incident reports, root-cause analyses, and metrics dashboards to leadership, strengthening transparency and cross-functional communication.
- **Asset Procurement & Lifecycle Security:** Oversaw IT and security asset procurement, optimized endpoint protection tools, and enforced lifecycle controls, reducing vulnerabilities by 25%.

Schneider Electric

Cybersecurity Engineer Intern

Dubai, UAE

June 2020 - September 2020

- Access Control & Network Security:** Configured Role-Based Access Control (RBAC) and network ACLs for industrial client systems, reducing operational vulnerabilities and improving access security across critical assets.
- Threat Hunting & Incident Simulation:** Conducted threat-hunting exercises and incident response simulations within ICS/SCADA environments, enhancing detection and containment capabilities for operational technology (OT) threats.
- IoT Security & Compliance:** Designed IoT cybersecurity frameworks aligned with NIST 800-82 and ISO 27001 standards, contributing to incident response planning, risk assessment, and mitigation strategies for edge and connected devices.

PROJECT EXPERIENCE

ATO Detection & Auto-Containment (Flask, Datadog, Azure) - [Link](#)

August 2025 – Present

- Automation & Detection:** Built a production-style lab automating ATO detection and session revocation, using Datadog detections, HMAC-signed Azure Function webhooks, and real-time Flask session containment.

Azure Event-Driven URL Scanner (FastAPI, Terraform, GitHub Actions, Azure) - [Link](#)

July 2025 – Present

- Event-Driven Architecture:** Developed a secure event-driven URL scanning microservice on Azure Container Apps (ACA) with Terraform IaC, OIDC GitHub Actions, Key Vault integration, and KEDA autoscaling to demonstrate scalable DevSecOps workflows.

Splunk Enterprise + Splunk SOAR Homelab (Windows/Linux, Python, SOAR) - [Link](#)

May 2024 – Present

- SIEM & SOAR Automation:** Built a 24×7 Splunk ES/SOAR homelab to ingest logs, triage alerts, and automate incident response, demonstrating real-time threat detection and containment.

Server Hardening Playbook (Bash, Linux Security) - [Link](#)

January 2023 – Present

- System Hardening:** Created an idempotent Bash script to harden Linux servers, enforcing password policies, firewall/SSH configurations, and service hardening, improving security compliance across multiple systems.

EDUCATION

Illinois Institute of Technology

Chicago, IL

Master of Applied Science in Cybersecurity (M.A.S)

- Relevant Coursework:** Advanced Network Security, Cloud Security Architecture, Digital Forensics & IR
- Extracurricular:** Technical Consultant for International Consulting Network (ICON)

Rochester Institute of Technology

Rochester, NY

Bachelor of Science in Computing Security (B.Sc.)

- Relevant Coursework:** Penetration Testing, Computer System Forensics, Intelligent Security Systems, Cryptography, Network & System Security Audit, Network Design & Performance, Wireless Networking, Web Application Security, System Administration, Routing & Switching
- Extracurricular:** Dean’s List, Collegiate Penetration Testing Competition (CPTC) Regional Winner, Research Assistant in Security Systems

CERTIFICATIONS

CompTIA – Security+ ([Link](#))

Issued: Feb 2025

Amazon Web Services (AWS) – AWS Certified Cloud Practitioner

In Progress, Expected: Dec 2025

Amazon Web Services (AWS) – AWS Certified Security – Specialty

In Progress, Expected: Dec 2025

TECHNICAL SKILLS

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & Infrastructure: AWS (EC2, IAM, ELB, S3, RDS, CloudWatch, EKS), Azure (AD, Defender, DevOps), GCP, Microsoft 365, Microsoft Intune

Security & Compliance: Zero Trust, IAM, SIEM (Splunk ES, SOAR), MITRE ATT&CK, NIST, ISO 27001, ITIL, SOX, PCI DSS

Programming & Automation: Python, Bash, C, SQL, Ruby, PowerShell, JavaScript, Node.js, HTML/CSS

APIs & Web Development: REST, GraphQL, React

Containerization & Orchestration: Docker, Kubernetes, Helm, Bitbucket/GitHub CI/CD, Git

Networking & Systems: Terraform, Ansible, PowerBI, Linux (Debian, Ubuntu, CentOS), Windows Server, MacOS, Wireshark, Nmap, Cisco Wireless/Firewall
