SUMMARY

DevOps & DevSecOps Engineer with **5+** years of experience designing and securing **AWS** and **Azure** cloud platforms in regulated, production environments. Expertise in **Kubernetes**, **Terraform**, **CI/CD automation**, and **security observability (SIEM, IAM, Zero Trust)**. Proven track record **reducing incident response time**, **eliminating audit violations**, and **hardening multi-account cloud infrastructure** through automation and policy guardrails.

PROFESSIONAL EXPERIENCE

DevOps Engineer | JPMorgan Chase | USA

July 2025 - Present

- Engineered **AWS** observability with **Prometheus**, **Grafana** and **Splunk** reducing anomaly detection time from 20 minutes to <8 mins for mission-critical trading systems.
- Spearheaded centralized **SIEM** integration of **CloudTrail**, **IAM**, and **application logs**, resolving 40 high-priority security incidents monthly within **SLA targets**.
- Governed production **IAM** and **RBAC Frameworks** aligned with **Zero Trust** and **SOX Controls**, eliminating **Audit Violations** and saving 200 **Engineering Hours** per quarter.
- Secured 6 production **AWS environments** by enforcing **Terraform guardrails**, **automated patching**, and **multi-account security** baselines for **24x7** financial operations.
- Directed cross-functional **Incident Response** and **CI/CD Orchestration** using **Jenkins** and **Git**, restoring 15 **Critical Services** during priority outages while maintaining **Regulatory Compliance**.
- Automated operational tasks and deployment validation using **Python** and **Bash** across **Linux-based AWS instances**, saving 15+ engineer hours per week and standardizing release checks.
- Implemented **OpenTelemetry** tracing across **Kubernetes (EKS/AKS)** services, cutting issue isolation from ~45 mins to <15 mins and improving performance visibility.

Cloud DevOps Engineer | James Fisher Straininstall | UAE

May 2022 - August 2023

- Orchestrated secure **CI/CD pipelines** using **Docker**, **Ansible**, **Python**, and **Bitbucket** collaborating with engineering teams to standardize deployments and automate release workflows, saving 10+ hours/week.
- Implemented **Azure RBAC**, **Managed Identities**, and **Key Vault governance** aligned with **Zero Trust** principles, passing 3 internal security audits with zero access violations.
- Consolidated infrastructure monitoring with **Azure Monitor**, **Log Analytics**, **Application Insights**, and **CloudWatch**, reducing production incident detection time from 25 minutes to under 9 minutes.
- Optimized **Linux (Debian/CentOS)** systems and **PostgreSQL databases**, working closely with operations teams to stabilize industrial workloads and reduce average query latency from 3.2 seconds to 1.4 seconds.
- Led secure migration of 10 industrial applications to **Azure** using **private endpoints**, **encrypted networking**, and **hardened VM configurations**, improving system availability during multi-site deployments.
- Facilitated structured **incident response** and release coordination across infrastructure and field engineering teams, restoring critical services within 2-hour SLA windows during live operational escalations.

DevOps Engineer | KPMG | UAE

September 2020 – April 2022

- Deployed centralized telemetry using **AWS CloudWatch** and **AWS X-Ray**, collaborating with client engineering teams to streamline root-cause analysis and reduce incident resolution time from 3 hours to under 90 minutes.
- Engineered **security observability pipelines** with **CloudTrail** and **VPC Flow Logs**, strengthening audit readiness and enabling investigation of 25+ security cases per month across regulated client environments.
- Administered **IAM governance** using role segmentation and permission boundaries, partnering with compliance teams to support quarterly audit reviews with zero access violations.
- Automated policy validation and **configuration drift detection** using **AWS Config** and **Python**, eliminating 10 hours per week of manual compliance checks across 4 enterprise accounts.
- Maintained hardened **Linux compute environments** through structured patch orchestration and service hardening, improving platform stability during two major client production releases.
- Refined **Jenkins-based CI/CD pipelines** integrating build validation and artifact controls, accelerating secure deployments for 8 client applications.
- Collaborated with **Security**, **Infrastructure**, and **Application teams** to integrate **container scanning (Trivy)** and static analysis into pipelines, preventing insecure builds from progressing to staging across 4 client projects.

Cloud Engineer | Schneider Electric | UAE

June 2020 – August 2020

- Configured **RBAC policies**, **network ACLs**, and **Azure AD controls** for cloud-connected industrial systems, collaborating with OT engineers to secure access across 40 defined user roles supporting critical workloads.
 - Assessed security posture across **OT/ICS and SCADA-integrated environments**, reviewing **firewall** rules and segmentation policies with senior engineers, identifying 12 configuration gaps documented for remediation.
 - Supported simulated **incident response** and log analysis using **SIEM tooling** and structured troubleshooting, contributing to containment playbooks that reduced response coordination time by 30 minutes per exercise.
 - Mapped **cloud** and **IoT security** controls to **NIST 800-82** and **ISO 27001** frameworks, producing 10 compliance artifacts used in formal risk assessments and client audit reviews.
-

TECHNICAL SKILLS

Programming & Scripting: Python (PySpark, Pandas, NumPy), SQL, Bash, PowerShell

Cloud Platforms: AWS (EC2, S3, VPC, IAM, RDS, ELB, EKS, CloudWatch, X-Ray, CloudTrail), Microsoft Azure (VMs, VNet, Azure AD, Defender, Azure Monitor, AKS, Key Vault), Google Cloud Platform (GCP)

Containers & Orchestration: Docker, Kubernetes (EKS, AKS), Helm, Container Hardening

Infrastructure as Code & Configuration Management: Terraform, CloudFormation, ARM Templates, Ansible

CI/CD & Automation: Jenkins, GitHub Actions, Azure DevOps, Bitbucket Pipelines

DevSecOps & Security: IAM, RBAC, Zero Trust, OWASP Top 10, MITRE ATT&CK, NIST, ISO 27001, SIEM (Splunk), Vulnerability Scanning

Security & Secrets Tooling: Trivy, Snyk, Checkov, tfsec, Semgrep, SonarQube, Gitleaks, HashiCorp Vault, AWS Secrets Manager, Azure Key Vault

Monitoring & Observability: Prometheus, Grafana, ELK Stack, CloudWatch, Azure Monitor, Real-time Telemetry & Alerting

Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis

Operating Systems & Networking: Linux (Ubuntu, Debian, CentOS), Windows Server, DNS, Load Balancers, Firewalls, Wireshark, Nmap

Version Control & Ways of Working: Git, GitHub, GitLab, Agile (Scrum), Runbooks, Incident Automation

EDUCATION

Master of Applied Science in Cybersecurity | Illinois Institute of Technology | IL August 2023 – May 2025

B.S in Computing Security | Rochester Institute of Technology | NY August 2017 – December 2021

PROJECTS

[ATO Detection & Auto-Containment](#) : Developed real-time account takeover detection for 10,000+ users using **Datadog** signals, **Flask webhooks**, and **Azure** Functions, programmatically revoked compromised sessions, preventing over 1,500 fraudulent logins.

[Azure Event-Driven URL Scanner](#) : Built an event-driven URL scanning microservice using **FastAPI** on **Azure** Container Apps, provisioning infrastructure with **Terraform IaC** and implementing **GitHub** Actions **CI/CD** via **OIDC** authentication without long-lived cloud credentials.

[Splunk Enterprise + Splunk SOAR Homelab](#) : Deployed a 24×7 **SIEM/SOAR** environment using **Splunk** Enterprise **Security** and **Splunk SOAR**, ingesting **Windows** and **Linux** logs to support centralized monitoring, alert triage, and automated response workflows.

CERTIFICATIONS

- **[CompTIA Security+](#)**
- **Amazon Web Services Certified Cloud Practitioner**
- **Amazon Web Services Certified DevOps Engineer – Professional**
